Standard Specification for
Hardened Steel Washers (Metric)\(^1\)

This standard is issued under the fixed designation F436M; the number immediately following the designation indicates the year of
original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A
superscript epsilon (\(\epsilon\)) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope\(^*\)

1.1 This specification covers the chemical, mechanical, and
dimensional requirements for metric hardened steel washers
for use with fasteners having nominal thread diameters M12
through M100. These washers are intended for general-purpose
mechanical and structural use with bolts, nuts, studs, and other
internally and externally threaded fasteners. These washers are
suitable for use with fasteners covered in Specifications
A325M, A490M, A563M and with fasteners of Specification
F568M property classes 8.8 and higher.

1.2 The types of washers covered in this specification are:
1.2.1 Type 1—Washers made of carbon steel.
1.2.2 Type 3—Washers made of steel having atmospheric
corrosion resistance and weathering characteristics comparable
to that of steels covered in Specifications A242/A242M,
A588/A588M, and A709/A709M. The atmospheric corrosion
resistance of these steels is substantially better than that of
carbon steel with or without copper addition. See 5.1. When
properly exposed to the atmosphere, these steels can be used
bare (uncoated) for many applications.
1.2.3 This specification provides for furnishing Type 3 to
chemical composition or a Corrosion Resistance Index (CRI)
of 6 or higher at the suppliers option.
1.3 The styles of washers covered in this specification are:
1.3.1 Circular Washers—Circular washers in nominal sizes
12 mm through 100 mm, are suitable for applications where
sufficient space exists and angularity permits.
1.3.2 Beveled Washers—Beveled washers are square and
rectangular, in nominal sizes 12 mm through 36 mm, with a
beveled 1:6 surface for use with American Standard beams and
channels.
1.3.3 Clipped Washers—Clipped washers are circular or
beveled for use where space limitations necessitate that one
side be clipped.

1.4 Terms used in this specification are defined in Termi-
nology F1789 unless otherwise defined herein.

1.5 The values stated in SI units are to be regarded as
standard. No other units of measurement are included in this
standard.

NOTE 1—This specification is the metric counterpart of Specification
F436.

1.6 This standard does not purport to address all of the
safety concerns, if any, associated with its use. It is the
responsibility of the user of this standard to establish appro-
priate safety and health practices and determine the applica-
bility of regulatory limitations prior to use.

3. Ordering Information

3.1 Orders for washers under this specification shall include the following:
3.1.1 Quantity,
3.1.2 Name of product, (that is, circular washer, beveled washer, clipped circular washer, or clipped beveled washer),
3.1.3 Coating, if required (that is, hot-dip galvanized, mechanically galvanized, Zinc/Aluminum Corrosion Protective Coating, etc.),
3.1.3.1 When galvanized washers are specified, the type of galvanizing, such as hot-dip or mechanical (see 6.1 and 6.3),
3.1.3.1.1 When the type of galvanizing is not specified, the manufacturer, at his option, may furnish hot-dip or mechanically galvanized washers,
3.1.4 Dimensions, nominal size, and other dimensions, if modified from those covered in this specification,
3.1.5 Material type of washer (that is, Type 1 or Type 3),
3.1.5.1 When the type is not specified, either Type 1 or Type 3 washers may be supplied when permitted by the purchaser.
3.1.5.2 When atmospheric corrosion resistance is required, Type 3 washers shall be specified by the purchaser.
3.1.6 Surface roughness control (see S1),
3.1.7 ASTM designation and year of issue, and
3.1.8 Any special requirements.

Note 2—Two examples of ordering descriptions follow: (1) 1000 pieces, circular washers, hot-dip galvanized, 24 mm, Type 1 ASTM A436M, dated ________., (2) 5000 pieces, beveled washers, 22 mm, Type 3, ASTM A436M, dated ________.

4. Materials and Manufacture

4.1 Steel used in the manufacture of washers shall be produced by the open-hearth, basic-oxygen, or electric-furnace process.
4.2 All washers in nominal sizes 12 through 36 mm, shall be through-quenched-and-tempered. Washers in nominal sizes larger than 36 mm may be either through-quenched-and-tempered or carburized, quenched-and-tempered at the manufacturer’s option.

4.3 Hot-dip galvanized washers shall be hot-dip galvanized in accordance with the requirements for Class C of Specification A153/A153M. Mechanically galvanized washers shall be mechanically zinc-coated, and the coating and coated washers shall conform to the requirements for Class 50 of Specification B695. Zinc/Aluminum Corrosion Protective Coating shall be coated and the coating and coated washers shall conform to the requirements of Grade 3 of Specification F1136M.

4.4 If washers are heat treated by a subcontractor, they shall be returned to the manufacturer for testing prior to shipment to the purchaser.

5. Chemical Composition

5.1 Type 1 washers shall conform to the chemical composition requirements specified in Table 1.

5.2 Type 3 washers shall conform to the Heat Analysis specified in Table 1. Alternatively, at the supplier’s option, Type 3 washers having a Copper minimum Heat Analysis of 0.25%, Phosphorous and Sulfur conforming to Table 1 and a Corrosion Index of 6 or higher calculated from the Heat Analysis as described in Guide G101 Predictive method based on the data of Larabee and Coburn shall be accepted.

5.3 For Type 1 and 3 furnished to the Chemical Compositions in Table 1, Product Analyses may be made by the purchaser on finished washers representing each lot. The Chemical Composition shall conform to the requirements in Table 1, Product Analysis.

5.4 Product Analysis are not applicable to Type 3 washers furnished to a CRI of 6 or higher. Acceptance shall be based on the CRI of 6 or higher calculated from the Heat Analysis.

5.5 Chemical analyses shall be performed in accordance with Test Methods, Practices, and Terminology A751.

\(\textsuperscript{a}\) When providing Weathering Steels to a calculated corrosion index use the Lagault-Leckie formula from Guide G101. Link to online calculator: http://www.astm.org/Commit/G01_G101Calcult1100.xls

\(\textsuperscript{b}\) Type 3 steel washers may also be manufactured from any of the steels listed in Table 2 of Specification F568M.

\textsuperscript{3} The last approved version of this historical standard is referenced on www.astm.org.

6. Mechanical Properties

6.1 Through-quenched-and-tempered washers shall have a Rockwell hardness of 38 to 45 HRC, except when hot-dip galvanized, in which case they shall have a Rockwell hardness of 26 to 45 HRC.

6.2 Carburized, quenched-and-tempered washers shall be carburized to a minimum depth of 0.40 mm and shall have a Rockwell hardness of 69 to 73 HRA.

6.3 When mechanically galvanized, washers shall have the same hardness range as noncoated washers.

7. Dimensions and Tolerances

7.1 Circular and clipped circular washers shall conform to dimensions given in Table 2. All dimensions apply prior to plating or coating.

7.1.1 The axis of the inside hole shall be located at true position with respect to the axis of the washer circumference within a tolerance zone having a diameter of 0.6 mm for washers of nominal sizes 16 mm and smaller and 0.9 mm for washers of nominal sizes 20 mm and larger.

7.1.2 Washers shall be flat within 0.01 mm/mm outside diameter.

7.1.3 As a result of the punching process, the inside diameter of the washer generally consists of three distinct sections. On the punch entry side of the washer there is some drawing in of the material resulting in a rounded corner section, following which is a substantially parallel section, and finally at the exit side a tapered breakout may occur (see Fig. 1). The parallel sided section of the washer inside diameter shall be within the limits specified in Table 2, however, the specified maximum inside diameter may be exceeded at the washer face on the breakout side by a maximum taper allowance of 25% of the specified maximum washer thickness for each size.

7.2 Beveled washers shall conform to dimensions in accordance with ANSI B18.23.2M.

7.3 Clipped beveled washers shall conform to dimensions for beveled washers in accordance with ANSI B18.23.2, except that one edge may be clipped off not closer than 0.0875 times the washer nominal size from the center of the hole.

8. Workmanship, Finish, and Appearance

8.1 Washers shall be free of excess mill scale, excess coatings, and foreign material on bearing surfaces. Arc and gas cut washers shall be free of metal spatter.

9. Sampling and Number of Tests and Retests

9.1 The requirements of this specification shall be met in continuous mass production for stock, and the manufacturer shall make sample inspections to ensure that the product conforms to the specified requirements. Additional tests of individual shipments of material are not ordinarily necessary.

9.2 When specified in the purchase order, the manufacturer shall furnish a test report certified to be the last complete set of mechanical tests for each stock size in each shipment.

* Nominal washer sizes are intended for use with fasteners of the same nominal thread diameter.
* Washers may be clipped on one side not closer to the center of the washer than width E.
9.3 When weathering steels are furnished to Corrosion Resistance Index, the CRI number shall be calculated for each heat.

9.4 When the purchaser requires that additional tests be performed by the manufacturer to determine that the properties of products in an individual shipment are within specified limits, the purchaser shall specify the testing requirements, including the sampling plan and basis of acceptance, in the inquiry and purchase order.

9.4.1 When the purchaser does not specify the sampling plan and basis of acceptance the conditions in 9.4.1.1 through 9.4.1.3 shall apply:

9.4.1.1 The lot, for purposes of selecting samples, shall consist of all washers offered for inspection and testing, at one time, that are the same type, style, nominal size, and surface finish.

9.4.1.2 From each lot, samples shall be selected at random and tested for each requirement, except as specified in 9.4.1.3, in accordance with Table 3.

9.4.1.3 When determining the weight of coating of plated and coated washers, the sampling plan defined in 9.4.1.2 shall apply, except that in no case shall the sample consist of less than three washers.

10. Test Methods

10.1 Hardness tests shall be performed in accordance with Test Methods F606M.

10.2 Corrosion Resistance Index:

10.2.1 The Corrosion Resistance Index shall be calculated from the Heat Analysis in accordance with Guide G101 Prediction Method based on the data of Larabee and Coburn.

11. Inspection

11.1 The inspector representing the purchaser shall have free entry to all parts of the manufacturer’s works that concern the manufacture of the material ordered. The manufacturer shall afford the inspector all reasonable facilities to satisfy that the material is being furnished in accordance with this specification. All tests and inspections required by the specification that are requested by the purchaser’s representative shall be made prior to shipment, and shall be conducted as not to interfere unnecessarily with the operation of the works.

11.2 If other than the normal inspection for continuous mass production of parts as stipulated in 9.1 is required by the purchaser, it shall be specified in the inquiry and contract order.

12. Rejection

12.1 Disposition of nonconforming washers shall be in accordance with Guide F1470 section titled “Disposition of Nonconforming Lots.”

13. Certification and Test Report

13.1 Upon request of the purchaser in the contract or order, a manufacturer’s certification that the material was manufactured and tested in accordance with this specification, together with a report of the latest mechanical tests of each stock size in each shipment, shall be furnished at the time of shipment.

13.2 Data contained in the certified test report shall include material grade, hardness tests and calculated Corrosion Resistance Index when Type 3 is furnished to a Corrosion Resistance Index.

14. Responsibility

14.1 The party responsible for the fastener shall be the organization that supplies the fastener to the purchaser.

15. Product Marking

15.1 Washers shall be marked with a symbol, or other distinguishing marks, to identify the manufacturer or private label distributor, as appropriate.

15.2 Additionally, washers shall be marked to identify their being metric size. Preferably, the metric marking shall be the symbol “M,” but may be of other distinguishing design as determined by the manufacturer.

15.3 Additionally, Type 3 washers shall be identified with the symbol “3.”

15.4 Additional identification or distinguishing marks, or both, may be used by the manufacturer.

15.5 All marking symbols shall be depressed on one face of the washer.

15.6 Type and manufacturer’s or private label distributor’s identification shall be separate and distinct. The two identifications shall preferably be in different locations and, when on the same level, shall be separated by at least two spaces.

15.7 It is possible that during the clipping of circular washers, the marking symbols may be removed. This is acceptable provided the majority of washers in the lot still display the identification marks.

16. Packaging and Package Marking

16.1 Packaging:

16.1.1 Unless otherwise specified, packaging shall be in accordance with Practice D3951.

16.1.2 When special packaging requirements are required, they shall be defined at the time of the inquiry and order.
16.2 Package Marking:
16.2.1 Each shipping unit shall include or be plainly marked with the following information:
16.2.1.1 ASTM designation,
16.2.1.2 Size,
16.2.1.3 Name and brand or trademark of the manufacturer,
16.2.1.4 Number of pieces,
16.2.1.5 Purchase order number, and
16.2.1.6 Country of origin.

17. Keywords
17.1 carbon steel; metric; steel; washers; weathering steel

SUPPLEMENTARY REQUIREMENTS

The following supplementary requirements shall apply only when specified by the purchaser in the contract or order. Details of these supplementary requirements shall be agreed upon in writing between the manufacturer and purchaser. Supplementary requirements shall in no way negate any requirement of the specification itself.

S1. Surface Roughness

S1.1 Washers shall have a multi-directional lay with a surface roughness not exceeding 19 µm in height including any flaws in or on the surface.

S1.2 Burrs shall not exceed 0.25 mm in height.

SUMMARY OF CHANGES

Committee F16 has identified the location of selected changes to this standard since the last issue (A436M-10) that may impact the use of this standard. (Approved November 15, 2011.)

(1) Deleted—previous 5.5.
(2) Revised—Table 1.

Committee F16 has identified the location of selected changes to this standard since the last issue (A436M-09) that may impact the use of this standard. (Approved May 1, 2010.)

(1) 1.2.3 was added.
(2) In 5.2-5.4, 9, 10.2.1 and 13.2 provided for furnishing Type 3 to a corrosion Resistance Index of 6 or higher.
(3) Revised 12.1 Rejection and Rehearing to invoke Guide F1470.

Committee F16 has identified the location of selected changes to this standard since the last issue (A436M-04) that may impact the use of this standard.

(1) Revised—4.3 to add provision for specifying Zinc/Aluminum Corrosion Protective Coating conforming to Specification F1470, Grade 3.
