Standard Specification for Zinc Casting Alloy Ingot for Sheet Metal Forming Dies and Plastic Injection Molds

This standard is issued under the fixed designation B793; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope*  
1.1 This specification covers commercial zinc alloys in ingot form for remelting for the manufacture of dies and molds from the alloys as shown in Table 1.

1.2 This specification presents requirements for zinc alloys suitable for the production of sand cast or plaster cast forming dies for sheet metal stamping operations and plastic injection molding. Alloy A is intended for use in the fabrication of dies for sheet metal stamping under drop hammer and hydraulic pressure. Alloy B is a special purpose alloy of closely controlled composition and is primarily used in the manufacture of plastic injection molds.

1.3 This specification covers two zinc alloys which are specified and designated as follows:

<table>
<thead>
<tr>
<th>UNS</th>
<th>ASTM</th>
<th>Traditional</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z35543</td>
<td>Alloy A</td>
<td>Kirksite A</td>
</tr>
<tr>
<td>Z35542</td>
<td>Alloy B</td>
<td>Kirksite B</td>
</tr>
</tbody>
</table>

1.4 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.5 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to become familiar with all hazards including those identified in the appropriate Material Safety Data Sheet (MSDS) for this product/material as provided by the manufacturer, to establish appropriate safety and health practices, and determine the applicability of regulatory limitations prior to use.

2. Referenced Documents

2.1 The following documents of the issue in effect on date of order acceptance form a part of this specification to the extent referenced herein:

2.2 ASTM Standards:²
B897 Specification for Configuration of Zinc and Zinc Alloy Jumbo Block and Half Block Ingot
B899 Terminology Relating to Non-ferrous Metals and Alloys
B908 Practice for the Use of Color Codes for Zinc Casting Alloy Ingot
B949 Specification for General Requirements for Zinc Casting Alloy Ingot
E29 Practice for Using Significant Digits in Test Data to Determine Conformance with Specifications
E88 Practice for Sampling Nonferrous Metals and Alloys in Cast Form for Determination of Chemical Composition
E527 Practice for Numbering Metals and Alloys in the Unified Numbering System (UNS)
E536 Test Methods for Chemical Analysis of Zinc and Zinc Alloys

2.3 ISO Standards:³
ISO 3815-1 Zinc and zinc alloys—Part 1: Analysis of solid samples by optical emission spectrometry
ISO 3815-2 Zinc and zinc alloys—Part 2: Analysis by inductively coupled plasma optical emission spectrometry

3. Terminology

3.1 Terms shall be defined in accordance with Terminology B999.

4. Ordering Information

4.1 Orders for zinc alloy ingot under this specification shall include information as specified in Specification B949, Section 4.

5. Materials and Manufacture

5.1 The alloys may be made by any approved process.

5.2 The material covered by this specification shall be of uniform quality and shall be free from dross, slag, or other harmful contamination.

* A Summary of Changes section appears at the end of this standard

² For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For Annual Book of ASTM Standards volume information, refer to the standard’s Document Summary page on the ASTM website.

Copyright by ASTM Int'l (all rights reserved);
5.3 Jumbo or block ingots shall conform to configuration shown in Specification B897, or to a shape and size previously agreed upon.

6. Chemical Requirements

6.1 Limits—The alloy shall conform to the requirements as to chemical composition prescribed in Table 1.

6.2 Chemical requirement procedures shall be in compliance with the provisions of Specification B949, Section 5.2.

7. Sampling for Chemical Analysis

7.1 Sampling procedures shall be in compliance with the provisions of Specification B949, Section 6.

8. Method of Chemical Analysis

8.1 The determination of chemical composition shall be made in accordance with Test Methods E536, or ISO 3815-1, or ISO 3815-2 or other methods. In case of dispute, the results secured by Test Methods E536, or ISO 3815-1, or ISO 3815-2 shall be the basis of acceptance.

Note 1—Test Methods E536 is not directly applicable to the alloys in Specification B793. ISO 3815-1 and ISO 3815-2 are generic methods applied to zinc and zinc alloys. Each of the methods may be modified and formatted for the alloy to be assayed. An experienced chemist, using suitable and/or traceable standards along with valid quality assurance techniques, will be able to perform and validate the methods and demonstrate acceptable precision and accuracy.

9. Source Inspection

9.1 Source inspection shall be in compliance with the provisions of Specification B949, Section 7.

10. Rejection and Rehearing

10.1 Claims to be considered in accordance with the provisions of Specification B949, Section 8.

11. Investigation of Claims

11.1 Claims shall be investigated in accordance with the provisions of Specification B949, Section 8.

12. Settlement of Claims

12.1 Claims shall be settled in accordance with the provisions of Specification B949, Section 8.

13. Product Identification Marking and Packaging

13.1 Each slab, block, jumbo or ingot shall be marked for identification in accordance with the provisions of Specification B949, Section 10.

14. Keywords

14.1 blanking dies; casting; casting alloys; forming dies; gravity casting; Kirksite; Kirksite A; Kirksite B; sheet metal dies; zinc

### SUMMARY OF CHANGES

Committee B02 has identified the location of selected changes to this standard since the last issue (B793 – 12) that may impact the use of this standard. (Approved February 1, 2013.)

(1) A section on Source Inspection was reinstated after it had been incorrectly removed.

Committee B02 has identified the location of selected changes to this standard since the last issue (B793 – 10) that may impact the use of this standard. (Approved May 1, 2012.)

(1) Revisions have been made to Sections 4, 6, 7, 8, 9, and 10 to reference Specification B949 and delete certain portions of these sections formerly a part of this standard.

(2) The titles of Sections 7, 9, and 10 have been revised to be in agreement with a standard format for Subcommittee B02.04 standards.
